required for the can. The great majority of cans of average size are made of 90-, 95- and 100-lb. plates. Tin plate is further classified as to the weight or thickness of the tin coating, sheets with light coating being designated as "coke plate" and those with heavier coating as "charcoal plate."

There are several grades each of coke and charcoal plates. Coke plate is most extensively used, charcoal plate being required only for cans containing a product embodying an oxidizing agent.

Methods of can manufacture may be broadly classified into four groups: (1) hand made; (2)
